BIOGRAPHY

I am a third-year CS Ph.D. candidate at Washington University in St. Louis(WashU), advised by **Prof. Nathan Jacobs**. My research lies broadly in computer vision and multi-modal learning, especially generative models and AIGC-related topics, including controllable & personalized image/video generation and editing, and the combination of vision language models(VLMs) with image/video generation. I am also interested in generative models for 3D vision such as neural rendering and cross-view & novel view synthesis.

EDUCATION

- **Washington University in St. Louis** 2022.08 – 2027.05(Expected)
Ph.D. Candidate in Computer Science
St. Louis, MO, USA
Advisor: **Prof. Nathan Jacobs**
- **Tianjin University** 2018.09 – 2022.06
B.S. in Electrical and Information Engineering
Tianjin, China

WORK EXPERIENCE

- **Bosch Research**  2025.06 – 2025.09
Research Intern
Sunnyvale, CA, USA
◦ Researched on foundation vision-language models for autonomous driving.
- **OPPO US Research Center**  2024.05 – 2024.08
Research Intern
Palo Alto, CA, USA
◦ Researched on text-guided 3D Scene Generation, use Large-language model(LLM)-based dreaming and move-and-lookaround strategy to generate both geometric and semantic consistent 3D scene.
- **OPPO Research Institute**  2022.02 – 2022.05
Research Intern
Beijing, China
◦ Researched on image matting, proposed a framework to use human pose as guidance to achieve whole body matting.
- **Institute of Automation, Chinese Academy of Sciences, Beijing, China(CASIA)**  2021.01 – 2022.01
Research Intern
Beijing, China
◦ Researched on model compression and network pruning, especially the application on Vision Transformers.

PROJECTS

- **Physically Coherent Video Generation** 2025.01 – present
◦ Propose a framework that leverages vision language model(VLM)'s understanding and reasoning ability to achieve video generation with physically-coherent motion.
◦ Use VLM as test-time verifier during test-time scaling to sample physically-coherent and action-aligned object motion and trajectory.

- Grounded text-to-image Customization** 2024.01 – 2024.09
Collaboration with Adobe Research 
 - Proposed a framework that achieved zero-shot instance-level spatial grounding on both foreground subjects and background objects in the text-to-image customization task, enabling the customization of multiple subjects.
 - Our work is the first work to achieve a joint grounding on both subject-driven foreground generation and text-driven background generation.
 - Results show the effectiveness of our model in text-image alignment, identity preservation, and layout alignment.
- Text to 360-Degree Scene Generation** 2024.05 – 2024.11
 - Proposed a holistic text to 360-degree scene generation pipeline, which achieved consistent text-to-360-degree scene generation with customized trajectory-guided scene extension.
 - Introduced semantically guided novel view synthesis into the refinement of 3D-GS optimization, reducing artifacts and improving geometric consistency.
- Mixed-View Panorama Synthesis Using Geospatially-Guided Diffusion** 2023.05 – 2023.11

 - Introduced the task of mixed-view panorama synthesis, where the goal is to synthesize a novel panorama given a small set of input panoramas and a satellite image of the area.
 - Introduced an approach that utilizes diffusion-based modeling and an attention-based architecture for extracting information from all available input imagery.
- Open-World Generation of Stereo Images and Unsupervised Matching** 2024.09 – 2025.03

 - Proposed GenStereo, a novel diffusion-based framework for open-world stereo image generation with applications in unsupervised stereo matching.
- Co-training for Stereo and Flow with Unsupervised Domain Adaptation** 2023.01 – 2023.05

 - Built an end-to-end joint learning framework to combine unsupervised domain translation with optical flow estimation and stereo matching in the absence of real ground truth optical flow and disparity.
 - Applied novel constraints on the cycle domain translation process to achieve cross-domain translation with global and local consistency.
 - Employed task-specific multi-scale feature warping loss and iterative feature warping loss during the training phase to regulate the training process in both spatial and temporal dimensions.
- Vision-Language Pseudo-Labels for Single-Positive Multi-Label Learning** 2022.11 – 2023.05

 - Proposed a novel approach called Vision-Language Pseudo-Labeling (VLPL), which uses a vision-language model to suggest strong positive and negative pseudo-labels, and outperforms the current SOTA methods by 5.5% on Pascal VOC, 18.4% on MS-COCO, 15.2% on NUS-WIDE, and 8.4% on CUB-Birds.
- Pruning Lightweight Face Detection Network by Sparsity Training** 2021.01 – 2022.01

 - Performed the network training with sparsity regularization on channel scaling factors of each layer, and then removed the connections and the corresponding weights with the near-zero scaling factors after the sparsity training.
 - Applied the proposed pruning pipeline on a state-of-the-art face detection method, EagleEye, and got a shrunken model which has a reduced number of computing operations and parameters.
 - Achieved 56.3% reduction of parameter size with almost no accuracy loss on WiderFace dataset.
- Mobile AI 2021 Real-Time Camera Scene Detection Challenge** 2021.01 – 2021.03
Mobile AI Workshop @ CVPR 2021 
 - Used two-stage fine-tuning method to improve the accuracy and the model pruning method to improve the model's efficiency.
 - Used the float32-to-int8 quantization and model pruning methods to optimize our model.

SERVICES

- **Reviewer:** CVPR(2025), ECCV(2024), NeurIPS(2024,2025), ICML(2025), ICLR(2025)
- **Teaching Services (WashU):** CSE 559A Computer Vision (**Teaching Assistant/Grader**)

TECHNICAL SKILLS

Programming: Python, C/C++, Java, Matlab

Deep Learning Frameworks: Pytorch, Tensorflow

Research Frameworks: Diffusion models, Transformer, GAN, 3DGS, NeRF, CNN, CLIP

Languages: English, Chinese
