BIOGRAPHY

I am a fourth-year CS Ph.D. candidate at Washington University in St. Louis(WashU), advised by **Prof. Nathan Jacobs**. My research interests lie in computer vision and multi-modal learning, with a focus on generative models, vision-language models (VLMs) and AIGC-related topics. In particular: (1) Unifying vision understanding and generation, world models; (2) Controllable & personalized image/video generation and editing; (3) Integration of VLMs with generative models; (4) Generative models for 3D vision, including neural rendering, cross-view synthesis, and novel view synthesis.

EDUCATION

- | | |
|---|-----------------------------|
| • Washington University in St. Louis | 2022.08 – 2027.05(Expected) |
| <i>Ph.D. Candidate in Computer Science</i> | St. Louis, MO, USA |
| Advisor: Prof. Nathan Jacobs | |
| • Tianjin University | 2018.09 – 2022.06 |
| <i>B.S. in Electrical and Information Engineering</i> | Tianjin, China |

WORK EXPERIENCE

- | | |
|--|--------------------|
| • Bosch Research [🌐] | 2025.06 – 2025.09 |
| <i>Research Intern</i> | Sunnyvale, CA, USA |
| ◦ Researched on Unified Visual Understanding, Planning and Generation Models for autonomous driving. | |
| • OPPO US Research Center [🌐] | 2024.05 – 2024.08 |
| <i>Research Intern</i> | Palo Alto, CA, USA |
| ◦ Researched on text-guided 3D Scene Generation, use Large-language model(LLM)-based dreaming and video generation models to generate both geometric and semantic consistent 3D scene. | |
| • OPPO Research Institute [🌐] | 2022.02 – 2022.05 |
| <i>Research Intern</i> | Beijing, China |
| ◦ Researched on image matting, proposed a framework to use human pose as guidance to achieve whole body matting. | |
| • Institute of Automation, Chinese Academy of Sciences(CASIA) [🌐] | 2021.01 – 2022.01 |
| <i>Research Intern</i> | Beijing, China |
| ◦ Researched on model compression and network pruning, especially the application on Vision Transformers. | |

PROJECTS

- | | |
|--|-------------------|
| • Unified Understanding, Planning and Generation model for Autonomous Driving | 2025.06 – present |
| <i>Research Project during internship at Bosch Research</i> | |
| ◦ Developed a world-model -based framework that unifies trajectory planning and autoregressive future image generation, enhanced with Chain-of-Thought reasoning within a single vision-language model (VLM) . | |
| ◦ Enabled thinking visually before planning, leading to more accurate and robust decision-making, and demonstrated significant gains on vision-language planning(VLP) benchmarks. | |

- Physically Coherent Video Generation

2025.02 – present

- Proposed a framework that leverages **vision-language model(VLM)**’s physics understanding to enable video generation with physically consistent motion and accurate 3D dynamics.
- Achieved physically plausible video generation by combining relational alignment with foundation video understanding models, physics-aware feature encoding, and 3D geometry alignment.

- Grounded text-to-image Customization

Collaboration with Adobe Research

2024.01 – 2024.09

- Proposed a framework that achieved zero-shot instance-level spatial grounding on both foreground subjects and background objects in the text-to-image customization task, enabling the customization of multiple subjects.
- Our work is the first work to achieve a joint grounding on both subject-driven foreground generation and text-driven background generation.
- Results show the effectiveness of our model in text-image alignment, identity preservation, and layout alignment.

- Text to 360-Degree Scene Generation

Research Project during internship at OPPO US Research Center

2024.05 – 2024.11

- Proposed a holistic text to 360-degree scene generation pipeline, which achieved consistent text-to-360-degree scene generation with customized trajectory-guided scene extension.
- Introduced semantically guided novel view synthesis into the refinement of 3D-GS optimization, reducing artifacts and improving geometric consistency.

- Mixed-View Panorama Synthesis Using Geospatially-Guided Diffusion

2023.05 – 2023.11

- Introduced the task of mixed-view panorama synthesis, where the goal is to synthesize a novel panorama given a small set of input panoramas and a satellite image of the area.
- Introduced an approach that utilizes diffusion-based modeling and an attention-based architecture for extracting information from all available input imagery.

- Open-World Generation of Stereo Images and Unsupervised Matching

2024.09 – 2025.03

- Proposed GenStereo, a novel diffusion-based framework for open-world stereo image generation with applications in unsupervised stereo matching.

- Co-training for Stereo and Flow with Unsupervised Domain Adaptation

2023.01 – 2023.05

- Built an end-to-end joint learning framework to combine unsupervised domain translation with optical flow estimation and stereo matching in the absence of real ground truth optical flow and disparity.
- Applied novel constraints on the cycle domain translation process to achieve cross-domain translation with global and local consistency.
- Employed task-specific multi-scale feature warping loss and iterative feature warping loss during the training phase to regulate the training process in both spatial and temporal dimensions.

- Vision-Language Pseudo-Labels for Single-Positive Multi-Label Learning

2022.11 – 2023.05

- Proposed a novel approach called Vision-Language Pseudo-Labeling (VLPL), which uses a vision-language model to suggest strong positive and negative pseudo-labels, and outperforms the current SOTA methods by 5.5% on Pascal VOC, 18.4% on MS-COCO, 15.2% on NUS-WIDE, and 8.4% on CUB-Birds.

- Mobile AI 2021 Real-Time Camera Scene Detection Challenge

2021.01 – 2021.03

Mobile AI Workshop @ CVPR 2021

- Used two-stage fine-tuning method to improve the accuracy and the model pruning method to improve the model’s efficiency.
- Used the float32-to-int8 quantization and model pruning methods to optimize our model.

SERVICES

- **Reviewer:** CVPR(2025), ECCV(2024), NeurIPS(2024,2025), ICML(2025), ICLR(2025), ICCV(2025)
- **Teaching Services (WashU):** CSE 559A Computer Vision (**Teaching Assistant/Grader**)

TECHNICAL SKILLS

Programming: Python, C/C++, Java, Matlab

Deep Learning Frameworks: Pytorch, Tensorflow

Research Frameworks: Diffusion models, VLMs, Transformer, GAN, 3DGS, NeRF, CNN, CLIP

Languages: English, Chinese
